

Momentum Mobile was designed to make the automatic exchange of job data between our Momentum Service Job Software and established handheld systems as easy and efficient as possible. The aim is to provide a reliable system that saves time and increase accuracy when compared to keying data from manual job sheets.

A Link Program

Momentum Mobile is the reliable link between your office based Momentum package and your mobile service. There are a number of companies that have specialised in mobile handheld systems building up experience of how these systems need to be designed. In the same way we have specialised in systems for Lifting Equipment Companies. Rather than re-invent the wheel we chose to link to software specifically designed for mobile working. Momentum Mobile has been tested with the Barracuda mobile data management system from Tang Solutions Limited.

Sending Job Data

Step one is to select the jobs to send to the mobile system. Momentum Mobile allows you to view a list of jobs held within the Momentum Service system so that you can easily tick the jobs to send. The system records that jobs have already been sent but also allows you to re-send jobs. Once you have selected the jobs simply click 'send jobs' for the job data to be transmitted to your mobile service so that engineer's handhelds can be automatically updated with the information.

Select	Job No	Order	Account No	Customer Name	Work Description	Office Contact	Eng Code	Status
<input checked="" type="checkbox"/>	70	13/11/2007	MOT001	Mockington Crane Service	Demag L205 Service	James Wilkinson	JB	Outstanding

On The Handheld

An electronic job sheet is passed to the engineers handheld so that they can complete information such as :- Description of work carried out, Time On Site, Travel Time and Mileage , Notes of parts used etc. The electronic job sheet can be signed by the customer on the handheld for your records.

Receiving Job Data

Within Momentum Mobile you can identify at the click of a button which of the Sent Jobs have been completed by the engineer and are ready to pick up. You can then tick which ones you want to receive. The program will download the information and proceed to make the following entries in the Momentum Service system:

- The job is updated with notes on the work carried out and any parts used.
- Time sheet entries are generated for that job and engineer.
- A copy of the electronic job sheet with the customers signature is attached to the job and can be emailed to the customer.

Electronic Job Sheets

Momentum Mobile provides an electronic job sheet that will typically save you time currently spent transferring information from manual job\time sheets into your job and invoicing system. Momentum Service and Momentum Mobile working together with a third-party handheld system can allow accurate information to arrive back in to the job system on the day that the job is completed. Typically the invoice will be sent to your client more quickly since there are not the delays you often have with a more manual system. If the client has a query you can easily refer to the signed site time record and send it to the customer by email if required.

Momentum Mobile could provide you with a number of business benefits. If you are interested GSD Associates Limited will be happy to provide you with more information or a no obligation demonstration at a time to suit you.
